

What does VOIP (Voice Over Internet Protocol) do for me?

Allows a phone extension off your system anywhere in the world ... including mobile applications. This can result in big savings compared to traditional phone service cost.

How can Inland Communications save me money?

By evaluating your communication needs and desires, we can then engineer a customized system to grow your business. We won't sell you anything that you don't need.

Does Inland Communications do more than provide new systems and VOIP?

Yes. We can maintain your current system, add additional equipment and provide upgrades and we offer maintenance contracts.

How competitive is Inland Communications pricing?

Due to our competitive pricing, we have rarely lost a bid.

Does Inland Communications operate during the weekend and after hours?

Yes. We are available for your needs 24 hours a day / seven days a week.
